

## **METHOD AND DEVICE FOR LOCATING VISCERAL CONSTRICTIONS**

### **Abstract of the Disclosure**

A method and device are provided for determination of the location of an anatomical or functional constriction of a hollow body organ, such as the lower esophageal sphincter (LES) in the gastroesophageal junctional segment, or constrictions in other tubular organs of the body such as other parts of the gastrointestinal tract, the pancreatico-biliary tract, the genito-urinary tract, and blood vessels.
